

CASTLES OF THE AIR

*They've been built
Since time immemorial
From their foundations
To the lighting arrestor
Some threaten to rip the sky
Others span from ocean to ocean.*

*Interesting is the number
Of architects and consultants
These structures bring along
Right from project conception
Building up all the way
To official inauguration.*

Many are the materials
used in their construction
Chosen just at random
Convenience the sole criteria
Making it so easy
To speedily hit the sky.

Smile not so fast though
At their wonderland technologies
For much is at stake
In their structural integrity
Because up to this day
Am yet to see just one.
